

DATA GOVERNANCE

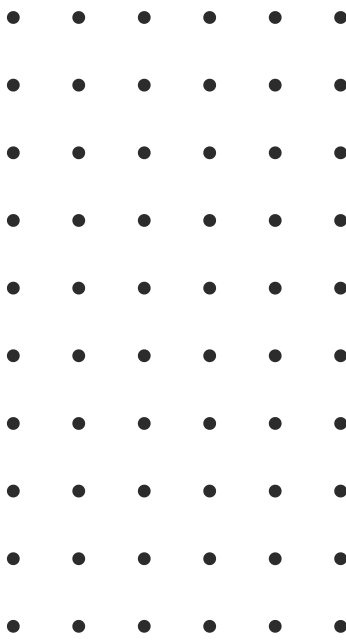

From Data Chaos to Decision Confidence

César Augusto Amórtegui Hernández
Data & Analytics Leader

THE REAL PROBLEM

Organizations have more data than ever, but trust is often missing.

- Different numbers for the same metric
- Disconnected data across teams
- Low confidence in information
- Poor decision-making

The issue is not lack of data.
It is **lack of trust.**

WHAT IS DATA GOVERNANCE?

Data Governance is the set of roles, processes, and policies that ensure data is:

Reliable

Consistent

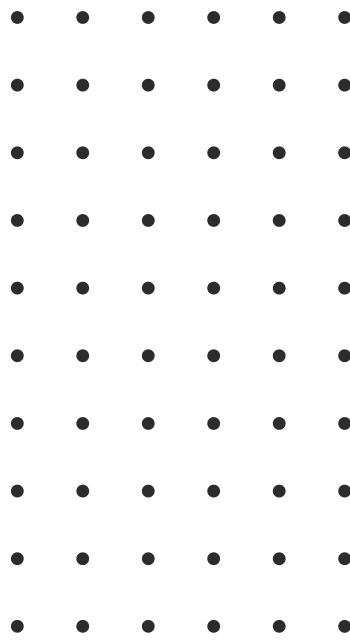

Secure

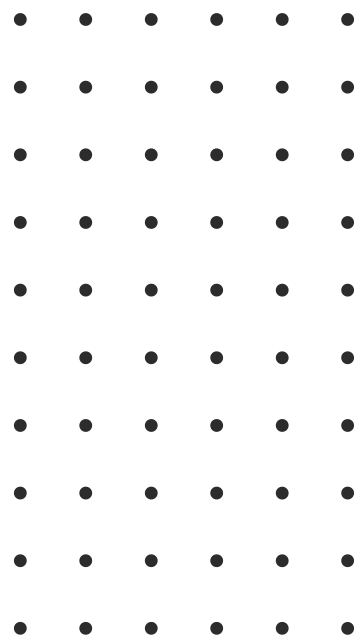

Aligned with
business needs

3 Key Pillars: People | Processes | Technology

A PRACTICAL FRAMEWORK

1

Define critical data
Identify key business
metrics.

2

Assign ownership
Define accountability.

3

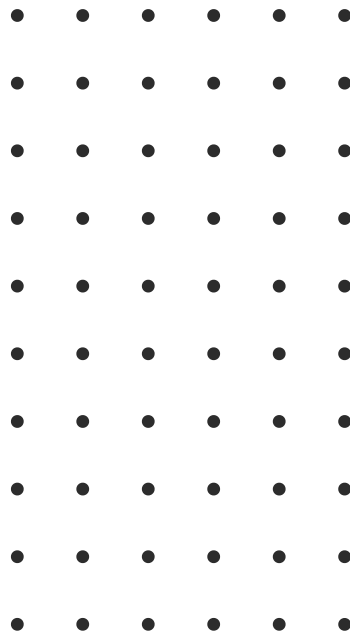

Establish rules
Standardize definitions.

4

Ensure data quality
Validate and monitor.

GOVERNANCE = COMPETITIVE ADVANTAGE

- ✓ Better decisions
- ✓ Organizational alignment
- ✓ Trust in data
- ✓ Higher impact of analytics

You don't need more data.
You need **better decisions.**
